

THE LADYBUG

John Yianni®
HIVE

ADDITIONAL
HIVE PIECES

• Ladybug Movement

These pieces can be added to a standard Hive set and are placed in the same way as other pieces. Once in play, the Ladybug moves three spaces, two on top of the hive then one down. It must move exactly two on top of the hive and then move one down on its last move. It may not move around the outside of the hive and may not end its movement on top of the hive. Even though it cannot block by landing on top of other pieces like the Beetle, it can move into or out of surrounded spaces. It also has the advantage of being much faster.

The Ladybug is a versatile Hive bug, it moves up over other pieces and down into unoccupied spaces. It can change direction when moving; so can get to positions that other pieces cannot quickly reach. The Ladybug is sometimes referred to as the Knight of Hive.
